Claims 1, 3, 4, 7 and 11-19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Figure 5 shows a small portion of the composition range barely meeting applicants characteristic requirements those skilled in the art would not assume that applicants were in possession of the concept of compositions having applicants "additive contribution" characteristic for other melt flow rates besides those associated with the materials of Figure 5. Applicants combination of limitations regarding melt flow, concentrations and "additive contribution" are therefore new matter.

US 2007/0082995 and 2002/0099160, previously cited of interest disclose MFR data at paragraphs 92 and 158 respectively for various polycarbonates.

Applicant's arguments filed 3-5-09 have been fully considered but they are not persuasive. The above rejection under 35 USC 112, first paragraph has been modified in response to applicants amendment and the rejection no longer relies in any part on the term "about" which no longer appears in the claims. While it may be accurate that Figure 5 supports applicants characteristic of the last three lines of claim 1 for the specific materials with specific melt flow rates to which the figure applies (and the specification in fact indicates that the figure pertains to the specific materials of Tables II-IV as set out in paragraph 17 of the published specification) , there is nothing in the specification as filed which discloses that the difference between the measured modulus

and expected modulus does not vary within the range of MFR's of the claimed range of MFR's. For instance would a blend of 65% HDPE with MFR of .9 and PC with an MFR of 1.1 be expected to have a greater modulus than predicted based on the law of mixtures just because a blend with .3 MFR HDPE and 2 MFR PC had such a modulus? There is nothing in applicants specification which broadly discloses than any blend with applicants claimed features has applicants stiffness characteristic.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
